DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gawa et al. in U.S. Patent No. 6,090,330 in view of Brown et al. in U.S. patent No. 3,698,797. Gawa et al. discloses a laser system (element 21) for producing an output beam, and target delivery optics (elements 28x,28y) to deliver the output beam to a target workpiece. Brown et al. teaches a laser attenuator with a relay telescope (using lenses 21,15) and a baffle (the second element 12 in figure 1) at the telescope focal point that is large enough to easily pass the output beam propagating to the target (since Brown et al. uses the later pinhole (element 13) to filter the light) and is small enough to block off angle and out of focus back reflections from the target delivery

Application/Control Number: 10/789,557

Art Unit: 1725

optics since the baffle absorbs energy of off angle reflections from the pinhole. It would have been obvious to adapt Gawa et al. in view of Brown to provide this to attenuate the power of the laser beam before it reaches the target workpiece. Regarding claim 3, the baffle is considered to be shaped like a large pinhole or alternatively can be considered a pinhole baffle since it is associated with a pinhole (element 13).

Page 3

- 4. Applicant's arguments filed 2 January 2007 have been fully considered but they are not persuasive. The lenses 13 and 15 act together as a relay telescope with lens 15 acting as a reimaging lens. The baffles of Brown are capable of blocking back radiation from both the pinhole and the workpiece. The baffles (element 12) have openings large enough to easily pass the output beam passing through the telescope and yet block off incorrectly angled and out of focus radiation reflected back to the telescope. Applicant's arguments in the paragraph on the bottom of page 3 have not weight since claims 1 and 3 do not recite any fluence or power level of the laser beam and thus could be at any power level. Regarding Applicant's arguments on page 5, the Brown et al. reference will attenuate the laser beam. Laser Beam attenuators in laser drilling apparatus are well known (e.g. see element 214 in Shoemaker et al. in U.S. Patent No. 6,172,329 and element 115 in Liu et al. in U.S. Patent No. 6,803,539, these references are not being used to reject the claims). By passing the light through lenses in applicant's telescope, applicant's apparatus inherently attenuates the laser beam slightly.
- 5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Claims 2 and 4-21 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Geoffrey S. Evans whose telephone number is (571)-272-1174. The examiner can normally be reached on Mon-Fri 6:30AM to 4:00 PM, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pat Ryan can be reached on (571)-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
